AUTHORIZATION AND RELEASE

Thank you for choosing iSmile Dental for your dental care. We hope to work with you to help you achieve excellent oral health. While recognizing the benefits of a pleasing smile and teeth that function well, you should be aware that dental treatment, like treatment of any other part of the body, has inherent risks. These are seldom great enough to offset the benefits of treatment, but should be considered when making treatment decisions. Benefits of dental treatment include: relief of pain, the ability to chew properly and enjoy eating, and the confidence and social interaction that a pleasing smile can bring. Common risks associated with virtually any dental procedure include:

- **Allergic reaction.** Dental materials and medications may trigger allergic or sensitivity reactions.
- **Long-term numbness (parasthesia).** Local anesthesia, or its administration, while almost always adequate to permit comfortable care, can result in temporary, or in rare instances, permanent numbness.
- **Muscle or joint tenderness:** Holding one's mouth open for prolonged periods of time, such as during dental treatment, can result in muscle or jaw joint tenderness. In a predisposed patient, it can precipitate a TMJ disorder.
- **Sensitivity in teeth or gums, infection, or bleeding.**
- **Swallowing or inhaling small objects.**

We follow procedural guidelines that most often lead to clinical success, but as in any other pursuit in health care, not everything always turns out the way it is planned. We will do our best to ensure that it does. Please feel free to ask questions in regard to all dental procedures that are recommended to you for yourself and for your dependent(s).

My signature below indicates that I have read and understand the general risks associated with dental treatment.
